SKILLS SUMMARY

Languages: C++, JavaScript, TypeScript, SQL

Frontend: React, React Router 7, Next.js, Zustand, React Query, shadcn/ui, Radix UI, TailwindCSS

Backend: Node.js, Express, REST APIs, WebSockets, OpenAI APIs

Databases: PostgreSQL, MySQL, Redis

DevOps & Tools: Docker, Kubernetes, CI/CD, Prisma, Amplitude Analytics

EXPERIENCE

Frontpage (YC S21)

Software Engineer

April 2025 – Present

Bangalore, India

EQHQ – New Product Development

- Developed the EQHQ frontend using **React Router 7 (SSR)**, **Zustand**, and **React Query**, achieving page loads of <300ms on core routes and <400ms on data-heavy views.
- Built responsive, accessible UI using **shadcn/ui**, Radix, and Tailwind, improving layout stability and mobile usability across breakpoints.
- Integrated **Amplitude Analytics + Session Replay**, reducing debugging time by **30–40%** and enabling faster identification of UX drop-offs.

Platform & Backend Engineering

- Built a **multi-turn conversational AI backend** with thread-based message persistence, integrating **OpenAI Chat Completion APIs** with streaming and context management.
- Designed **shareable URL system** with access control and optimized **price history pipeline** via third-party provider integration, achieving significant cost savings.
- Developed **data refresh pipelines** with admin tooling for issue reporting and targeted regeneration, resolving ingestion issues to ensure data integrity.
- Configured **Kubernetes infrastructure** including namespaces, deployments, ConfigMaps, and CronJobs for automated pipeline execution and job alerting.

FrontPage Platform Revamp

- Migrated the core platform to **React Router 7 (SSR)** with **Redux** and **React Query**, improving routing performance by **35–40%** and reducing bundle fragmentation.
- Optimized Core Web Vitals (LCP, FID, CLS), achieving **98+ Lighthouse scores** and significantly improving first-render performance across key routes.

PROJECTS

CineStream – Curated Movie Platform [Github](#)

- Created a curated movie and series platform offering Mubi-style film discovery with related content.
- Processed videos using FFmpeg and converted them to HLS for adaptive and reliable streaming.
- Built the full stack using React Router 7, Node.js, PostgreSQL, and Cloudflare R2 for CDN delivery.
- Implemented **JWT authentication** with **time-limited signed URLs** (R2 presigned URLs) for secure video access, preventing unauthorized streaming.
- Technologies:** React Router 7, Node.js, FFmpeg, HLS, PostgreSQL, Cloudflare R2

Wallet App [Link](#)

- Streamlined development workflow with **Turborepo**, enabling parallel execution of tasks for faster build times.
- Implemented a **CI/CD pipeline** to automate build testing and ensure deployment reliability.
- Replicated bank server functionality**, allowing users to add money to wallets via simulated netbanking (HDFC and Axis), built using Express.js.
- Ensured portability and consistency by packaging the application into a Docker container.
- Technologies:** React.js, Express.js, Next.js, Prisma, Docker, NextAuth, Turborepo, Zod.

WebScraper and Notification Application [Link](#)

- Designed and implemented a scalable web scraping application using Puppeteer to extract and store data from Hacker news (<https://news.ycombinator.com>).
- Developed real-time notification features using WebSocket integration for instant updates set to every 2 minutes and notification.
- Leveraged MySQL for structured data storage and Redis for efficient in-memory operations, ensuring high performance.
- Technologies:** Puppeteer, Websockets, Express.js, Docker, Redis.

EDUCATION

Vellore Institute of Technology

Bachelor of Technology GPA: 8.87

Branch: Computer Science and Engineering

Bhopal, Madhya Pradesh

Sept 2021 - July 2025
